Silver Oak Health, 3 Months

During my internship, I worked on several projects that allowed me to develop my web development skills. I learned a lot about front-end technologies such as HTML, CSS, and JavaScript. I also had the opportunity to work with popular front-end frameworks like React and Angular.

One project that stood out to me was a web application that I worked on using React. It was a weather application that displayed weather data for various cities. The biggest challenge that I faced was figuring out how to integrate the API that provided the weather data into my application. It was my first time working with APIs, so it took me some time to understand how they worked and how to properly use them in my code. However, after doing some research and consulting with my supervisor, I was able to successfully integrate the API and complete the project.

PROJECTS

YouTube Clone , 0 Days

A youTube clone, Used React Js as Front end Tailwind CSS for designing and Rapid API helped Providing the necessary data
